

## Ancillary Products > Clearfox® Disinfection/Filtration

### What is a ClearFox® Disinfection?

The use of various processes [chlorination or UV] to remove bacteria and pathogens from treated wastewater. Disinfection is often combined with pre-filtration to improve transmissivity.

### How does it work?

Depending on the application, the level of disinfection and whether a residual is required – either ultraviolet light or chlorine dosing is used. Filtration is achieved by single or double automatic sand and anthracite filters.

### What is special about the ClearFox® Disinfection/Filtration?

ClearFox® offers very efficient equipment selection for disinfection and filtration based on decades of experience on extremely varied applications.

### What are its applications?

Disinfection and filtration of treated water from any ClearFox® wastewater treatment system, across any sector [domestic, municipal, industrial].
