

## Ancillary Products > ClearFox® Mechanical Screens

### What is a ClearFox® mechanical screen?

A mechanical device for the removal of large inorganic particles from wastewater in order to protect downstream equipment. Models are also available for the removal of sand, grit and grease.

### How does it work?

Wastewater flows through the mesh or punched holes in the screen. Solids that are larger than the mesh/punched holes are retained in the screen and mechanically extracted and discharged by a screw conveyor.

### What is special about the ClearFox® Screens?

ClearFox® offers a range of different screen types, which can be selected depending on the specific application [bow, drum screw, etc]

### What are its applications?

Pre-treatment of municipal and industrial wastewater in combination with other ClearFox® products
